Aetrex Introduces Stretchable Shoe For Comfort & Protection

TEANECK, N.J. (Oct. 21, 2013)—Apex Foot Health & Wellness, a division of Aetrex Worldwide Inc., announced the launch of the Apex T2000 to the Stretchables Collection—shoes that provide maximum protection and optimum comfort for individuals suffering from diabetes, arthritis or swollen feet. The new addition is designed to limit stress at the areas of the foot most susceptible to pain. The collection includes a single hook and loop strap style that offers adjustability and allows easy entry, even for problem feet.

The Apex Stretchables offer half-inch removable depth and are constructed with three layers that can be removed to provide fitting flexibility and accommodate custom orthotics. Designed from seamless stretchable uppers with smooth insides, the shoes conform to the foot and are safe for people with neuropathy. The soft fabric linings wick away moisture and the tiny vents allow air to flow through promoting a dry and healthy environment for the foot. The shoes are machine washable and are appropriate for nursing care situations.

“The Apex T2000 is an essential addition to our Ambulator line of footwear and offer a great option for people who need the utmost care and protection for their feet,” said Larry Schwartz, CEO of Aetrex Worldwide, Inc. “Meticulous attention to detail allowed us to design and bring to market a shoe with features that are perfect for people suffering from advanced foot problems.”

The single strap design is offered in black and taupe and is available in four widths for both men and women. The Apex T2000 is PDAC verified for A5500. Visit aetrex.com.
